TRANSTHORACIC ECHOCARDIOGRAM REPORT

Patient:	Klonowski, James C	Study Date:	09/05/2025	Gender:	M
DOB:	06/07/1988	MRN:	200621198	Age:	37
Account:	6980256	Ht/Wt:	(73 in) (164.7 lb)	BP:	117 / 74
Access#:	14246373499				

Ordering physician: Fraley, Alexander
Referring physician: Fraley, Alexander
Attending physician: Fraley, Alexander
Reading physician: Tomasik, Scott MD
Sonographer: Guzman, Asusena

Reason for Study: Supraventricular tachycardia.

STUDY DATA: Transthoracic echocardiogram. M-mode, complete 2D, complete spectral Doppler, and color Doppler. Study status: Routine. Location: Heart Health and Vascular Medical Imaging Patient status: Outpatient. Body surface area: BSA: 1.98 m². Location: Echo laboratory. Procedure: Transthoracic echocardiography was performed. Image quality was fair.

ECG rhythm: Normal sinus rhythm

CONCLUSIONS

SUMMARY:

- Left ventricle:** Systolic function is normal. The estimated ejection fraction is 55-60%. Left ventricular diastolic function parameters are normal.
- Mitral valve:** There is mild regurgitation.

OBSERVATIONS

Left ventricle: The cavity size is normal. Wall thickness is normal. Systolic function is normal. The estimated ejection fraction is 55-60%. Wall motion is normal; there are no regional wall motion abnormalities. Left ventricular diastolic function parameters are normal.

Ventricular septum: Thickness is normal.

Right ventricle: The cavity size is normal. Wall thickness is normal. Systolic function is normal.

Left atrium: The atrium is normal in size.

Right atrium: The atrium is normal in size.

Mitral valve: The leaflets are normal (thickness). *Doppler:* Transvalvular velocity is within the normal range. There is no evidence for stenosis. There is mild regurgitation. The peak E-wave velocity is 0.76 m/sec. The velocity-time integral at leaflet coaptation is 22.7 cm. The deceleration time is 208 ms. The pressure half-time is 67 ms. The mean diastolic gradient is 1 mm Hg. The peak diastolic gradient is 2 mm Hg. The peak E/A ratio is 1.9. The valve area by pressure half-time is 3.28 cm². The valve area index by pressure half-time is 1.65 cm²/m². The valve area (LVOT continuity) is 2.47 cm². The valve area index (LVOT continuity) is 1.24 cm²/m². The valve area by pressure half-time is 3.28 cm². The valve area index by pressure half-time is 1.65 cm²/m². The valve area (LVOT continuity) is 2.47 cm². The valve area index (LVOT continuity) is 1.24 cm²/m². The mean diastolic gradient is 1 mm Hg. The peak diastolic gradient is 2 mm Hg.

Aortic valve: Trileaflet; The leaflets are normal thickness and noncalcified. *Doppler:* Transvalvular velocity is within the normal range. There is no stenosis. There is no regurgitation. The LVOT to aortic valve VTI ratio is 0.76. The valve area by the velocity-time integral method is 2.4 cm². The valve area index by the velocity-time integral method is 1.2 cm²/m². The mean systolic gradient is 3 mm Hg. The peak systolic gradient is 5 mm Hg.

Tricuspid valve: *Doppler:* Transvalvular velocity is within the normal range. There is no evidence for stenosis. There is no regurgitation.

* Auth (Verified) *

Klonowski, James C (200621198) - 9/5/2025

Pulmonic valve: *Doppler:* Transvalvular velocity is within the normal range. There is no evidence for stenosis. There is no significant regurgitation.

Aorta: Aortic root: The aortic root is normal.

Ascending aorta: The ascending aorta is normal.

Pericardium: There is no pericardial effusion. No evidence of pleural fluid accumulation.

Systemic veins:

Inferior vena cava: The vessel is normal in size. The respirophasic diameter changes are in the normal range (greater than or equal to 50%).
